PROBLEM STATEMENT

🚀 Snabbit's 10-minute house help service has seen strong initial adoption, but **only 15% of users engage habitually** (**completing ≥2 snabs per week**), with the **majority being infrequent or one-time users**.

This indicates low habit formation, limiting both

🔁 **user retention.**

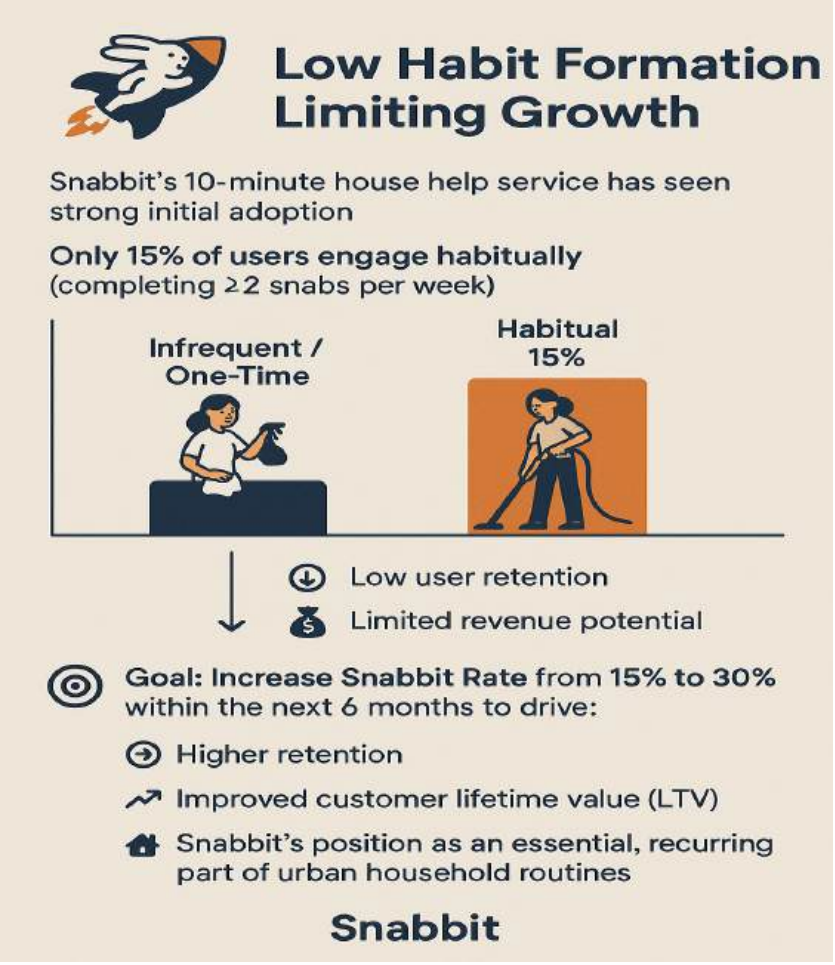
💰 **revenue potential.**

🎯 The goal is to **increase** the Snabbit Rate from **15% to 30% within the next 6 months** to drive:

🔄 Higher retention.

📈 Improved customer lifetime value (LTV).

🏠 Snabbit's position as an essential, recurring part of urban household routines.



Snabbit – Market Overview (as of 2025)

- **Founded**: 2024 by Aayush Agarwal (formerly Chief of Staff at Zepto); launched 10-minute home services in Powai, Mumba.

- **Core Offering**: Hyperlocal, on-demand services like cleaning, laundry, dishwashing, with trained "experts" arriving in 10–15 minutes

- **Geographic Footprint**: Operating across ~10 micro markets in Mumbai and Bengaluru; planning expansion to **200+ micro markets** in the next nine months.

- **Funding to Date**: Raised a total of **$25.5 million** (Seed $1M, Series A $5.5M, Series B $19M) led by Lightspeed, Elevation Capital, Nexus Venture Partners.

- **Valuation**: Post-money valuation of approximately **$80 million** after Series B.

- **Customer Adoption**: Onboarded over **25,000 customers**; average of **3 transactions per customer per month**.

- **Workforce Scale**: >600 “expert” providers onboard; many are women, earning ₹10K–₹40K+ per month and receiving insurance & mobility support.

- **Business Model & Pricing**: Hourly bookings priced ₹169–₹499; average ticket ₹250–₹270; growth at **~20% week-over-week** for the past four months.

- **Competitive Edge**:

    - Focus on speed (10-min promise) vs Urban Company’s slower service launches.

    - Full-stack control: sourcing, vetting, training & technology infrastructure.

- **Growth Strategy**: Scaling hyperlocal model via dense residential clusters; heavy investments in tech, logistics, and workforce.

- **Investor Confidence**: Strong backing from major VCs; Lightspeed partner highlighting Snabbit as a "game-changer" in structured, rapid home service

📊 Competitor Landscape Analysis

Competitor	Key Strengths	Unaddressed User Needs	Strategic Opportunities for Snabbit
Urban Company	Strong brand trust, intuitive user interface, and bundled plans	Does not cater to ultra-short tasks; most offerings are time-intensive (**≥30 mins**); lacks personalization in follow-ups	Position Snabbit as the go-to solution for “quick fixes” with a **10-minute** booking experience and smart, timely nudges.
HouseJoy	Wide range of services with strong presence in select cities	Inconsistent service quality and lack of professional standards among staff	Differentiate with a quality-first approach — promote trusted, top-rated Snabbers and allow users to rebook favorites
Local Household Help	High familiarity and habitual usage in households	Limited availability, no on-demand flexibility, unreliable attendance	Emphasize Snabbit’s dependability and scalability — “always available when you need it, no guesswork”
DIY/Family-Based Routines	Free and culturally ingrained for many users	Physically and mentally taxing; contributes to burnout, especially among women	Promote Snabbit as a self-care enabler — “lighten your load in 10 minutes, guilt-free and effortlessly”

💰 Pricing & Market Perception Landscape

Platform	Pricing Approach	User Perception	Current Gaps or Friction Points	Opportunity for Snabbit
Urban Company	Tiered pricing with subscriptions and trials. (e.g., **₹49/hr** for Insta Maids, **₹349–₹799** for room cleaning)	Seen as a premium, trustworthy brand. Users are willing to pay more for reliability.	Not well-suited for quick tasks; pricing is geared towards longer, more involved services.	Capture the “quick chore” segment by introducing ultra-short services priced **₹49–₹99** to build repeat usage.
HouseJoy	Pay-per-use model; deep cleaning for **3BHK** homes priced **~₹5,399**; occasional service bundles	Perceived as affordable, though quality can vary significantly by provider.	Experience often depends on which service professional is assigned, leading to unpredictability.	Offer transparent pricing and consistent service quality with a “trusted helper” model to differentiate.
Snabbit (Current)	Fixed price per **10-minute task** (assumed **₹140–₹200**)	Perceived as functional but lacks a compelling value narrative.	Users don’t fully associate the price with time saved or convenience provided.	Introduce loyalty bundles (e.g., **4 snabs/week**) and highlight emotional/time value to drive repeat use.

🔁 Retention Tactics Comparison Across Platforms

Platform	Retention Tactics
Urban Company	Leverages subscription models (like UC Plus), frequent promotions, and personalized re-engagement through notifications and emails to encourage recurring usage.
HouseJoy	Offers occasional service bundles, but lacks structured loyalty programs or consistent engagement strategies to retain users over time.
Snabbit (Current)	Currently does not have a formal retention strategy; lacks mechanisms such as loyalty rewards, usage-based incentives, or bundled service plans.

🔍 Research Questions

👤 Section 1: User Context

0. What is your name ? What is your age group ?
1. Where are you currently based?
2. What is your current household setup? (e.g., living alone, with family, roommates, etc.)
3. In your opinion, who would benefit most from Snabbit? (Describe a typical user in your own words.

🛠️ Section 2: Current Usage Patterns

4. How frequently do you currently use Snabbit for household help? (e.g., 1–2 times/week, occasionally, etc.)

5. What are your primary reasons for booking a Snabbit session? (Choose up to 2)

6. Which of the following best describes how Snabbit fits into your weekly routine? (e.g., planned routine, last-minute fix, rarely used, etc.)

7. What usually triggers your decision to use Snabbit? (e.g., sudden mess, time crunch, guest arriving, etc.)

🎯 Section 3: Motivation & Decision Drivers

8. When you're deciding whether to book a Snabbit session, which of the following matters most? (Choose up to 2: cost, reliability, speed, etc.)

9. How do you usually remember to use Snabbit? (e.g., reminder, app notification, personal mental cue)

10. Which of the following statements best matches your perception of Snabbit's value? (e.g., time-saver, costly convenience, emergency option)

11. How do you usually feel after completing a Snabbit session? (e.g., relieved, neutral, regretful)

🧱 Section 4: Barriers & Drop-off

12. What factors discourage you from using Snabbit more regularly? (e.g., price, reliability, low frequency of need, etc.)

13. If you've stopped using Snabbit or reduced usage, what changed? (Personal or situational reasons)

14. Have you ever had a frustrating Snabbit experience? What caused it? (Please share detailed examples)

🚀 **Section 5: Opportunities & Willingness**

15. Compared to your usual way of handling household tasks (e.g., full-time help, DIY), how does Snabbit perform? (Efficiency, reliability, emotional load)

16. Which improvements would make you more likely to use Snabbit regularly? (UX, pricing, notifications, etc.)

17. If Snabbit offered a prepaid subscription (e.g., 8 snabs/month), would you consider it?

18. How did you first hear about Snabbit?

✅ User Research Plan

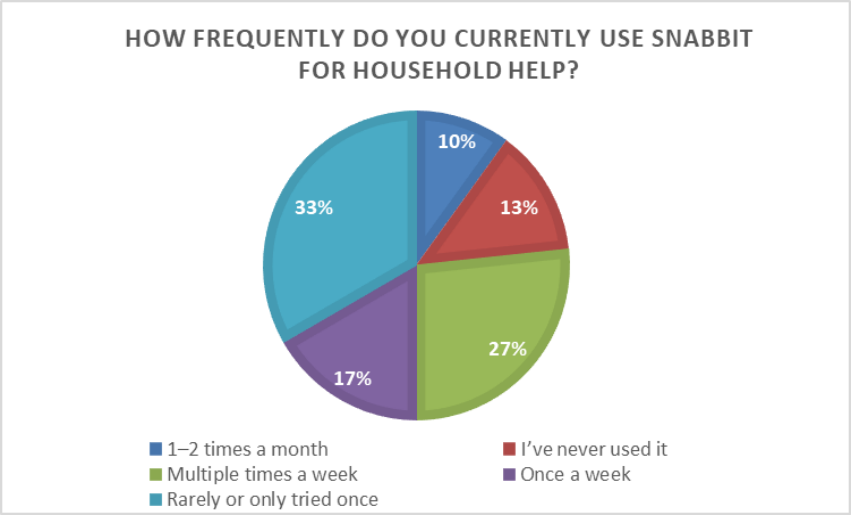
Below are the key insights and visual summaries derived from user survey responses, followed by detailed **user personas that capture common behaviors, needs, and motivations.**

User personas

1. Riya (Habitual User): Busy working mom using Snabbit for mental relief.

2. Arjun (One-time User): Young professional confused by app; didn't rebook.

3. Meera (Moderate User): Trust issues & high pricing hold her back. I Want flexibility.



📈 Usage Patterns and Frequency of Use

" Helps visualize how often users engage with Snabbit—great for understanding user retention and habit formation."

🔍 Key Insights:

- **Low Retention Among New Users**:
  A significant portion (33%) of users reported using Snabbit only once or rarely. This indicates a drop-off in engagement after initial exposure and highlights the importance of improving the first-use experience.

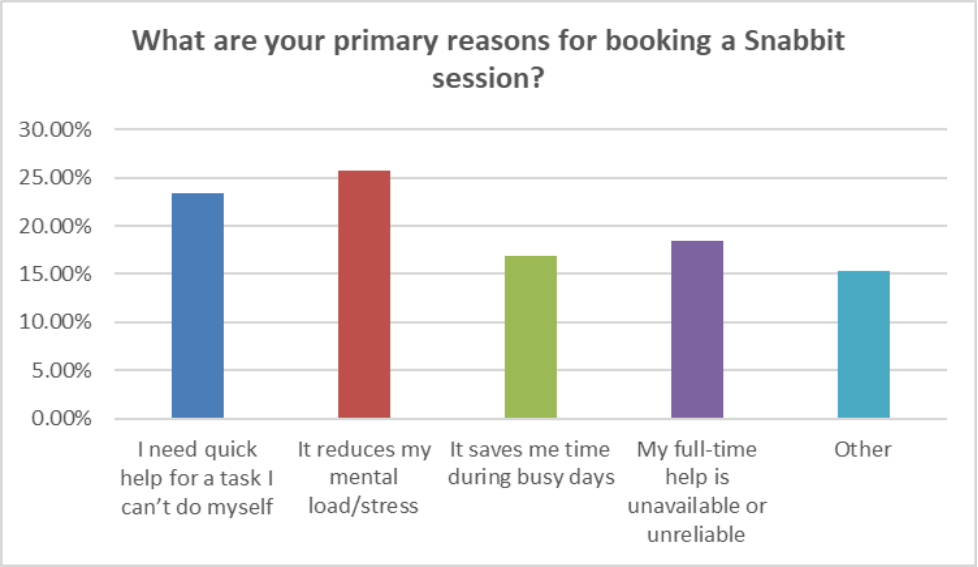
- **Untapped Potential**:
  13% of respondents have never used the platform, suggesting a need to address onboarding friction or unclear value messaging.

- **Strong Habitual Use in a Core Segment**:
  27% of users engage with Snabbit multiple times a week. This core user group shows promising signs of product fit and routine adoption.

- **Opportunities for Growth**:
  The 1–2 times/month (10%) and once/week (17%) user segments represent a potential growth area. With targeted nudges—like loyalty programs or personalized reminders—these users could be converted into more frequent users.

🧭 Strategic Implications: To improve overall engagement,

- **Enhance the first-time user experience** to reduce churn.
- **Re-engage inactive users** with tailored messaging and incentives.
- **Support moderate users** in forming usage habits through smart reminders or subscriptions.



🎯 Motivations for Using Snabbit

" Reveals key use cases. Useful for aligning product features and marketing. "

🔍 Key Insights:

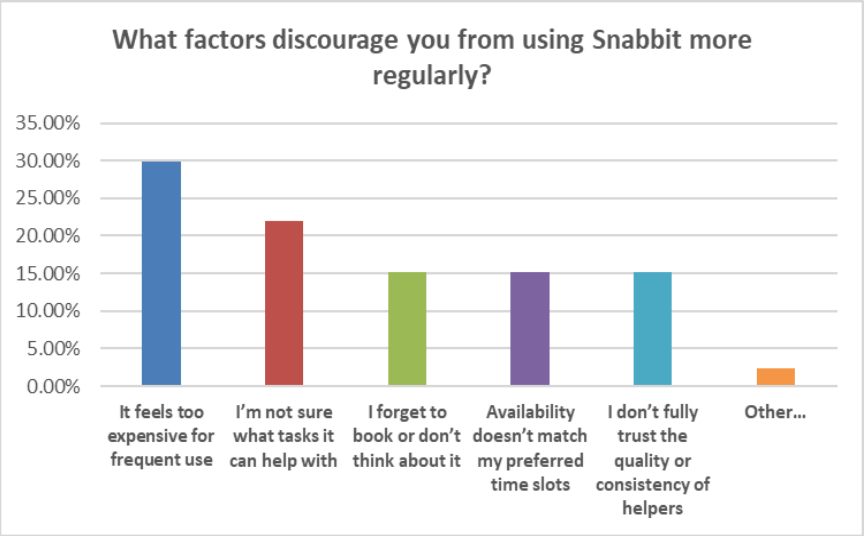
- 🧠 **Emotional Relief is a Top Driver**
  The leading reason (26%) for booking is to reduce mental stress. Snabbit is perceived as a tool to ease household burden.

- ⚡ **Urgency and Capability Gaps Matter**
  23% of users turn to Snabbit when they can't handle a task themselves—underscoring the importance of on-demand assistance.

- ⏱️ **Time-Saving Has Moderate Appeal**
  17% book Snabbit to save time during busy days, showing that convenience remains a core value proposition.

- 🧹 **Unreliable Full-Time Help Drives Usage**
  19% use Snabbit when their full-time help is unavailable, suggesting it acts as a backup solution.

- 🎯 **Other Motivations Suggest Custom Needs**
  15% cited other reasons—highlighting an opportunity to explore and tailor offerings to diverse household needs.



🚫 Barriers to Usage

" Identifies friction points. Useful for product improvement and UX design. "

🔍 Key Insights:

💰 Cost Concerns (29.9%)

- Nearly 1 in 3 users find Snabbit too expensive.
- **Fix:** ***Offer subscriptions, value bundles, or clearer communication of benefits.***

❓ Unclear Use Cases (22.0%)

- Many users aren't sure what Snabbit can help with.
- **Fix:** ***Add onboarding tutorials, task examples, and real user stories.***

⏳ Forgetfulness (15.2%)

- Users often forget to book or don't think of it.
- **Fix:** ***Enable reminders, calendar sync, or routine-building nudges.***

🕐 Availability Mismatch (15.2%)

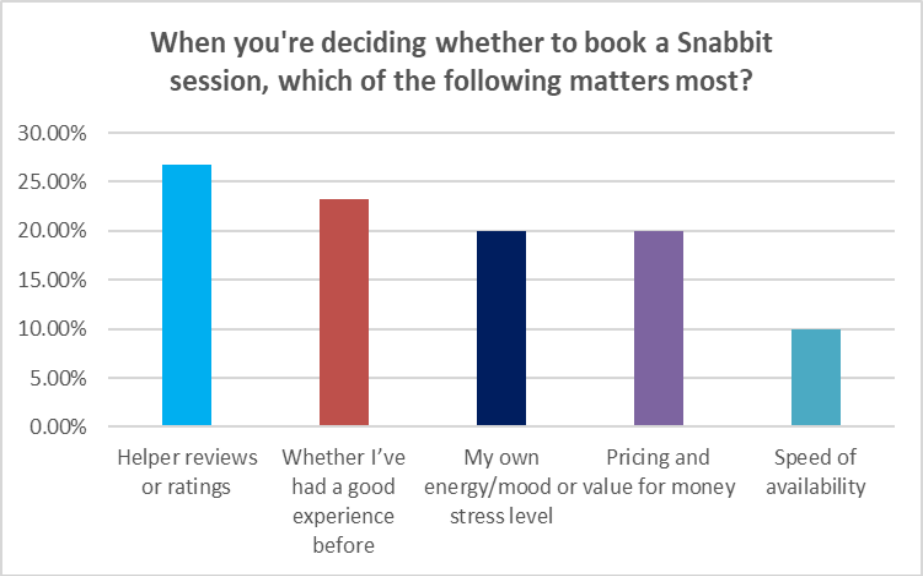
- Time slots don't match user preferences.
- **Fix:** ***Expand availability, offer flexible or advance booking options.***

🤝 Trust Issues (15.2%)

- Users doubt the consistency or quality of helpers.
- **Fix:** ***Display ratings, background checks, and offer service guarantees.***

🧩 Other (2.4%)

- A few users cited miscellaneous concerns.
- **Fix:** ***Explore further via interviews or open feedback.***



📊 Decision Triggers

" Shows what users care about most (e.g., cost, convenience, cleaner quality). "

🔍 Key Insights:

⭐ Trust Drives Decisions

"Helper reviews or ratings" is the top decision factor (26.7%).

👉 ***Users want assurance on service quality before booking.***

🧠 Experience Matters

"Whether I've had a good experience before" ranks second (23.3%).

👉 ***Positive past interactions strongly influence repeat usage.***

😩 Emotional State Plays a Role

"My own energy/mood or stress level" is significant (20%).

👉 ***Users turn to Snabbit when they feel overwhelmed or stressed.***

💸 Price Still Influences Choice

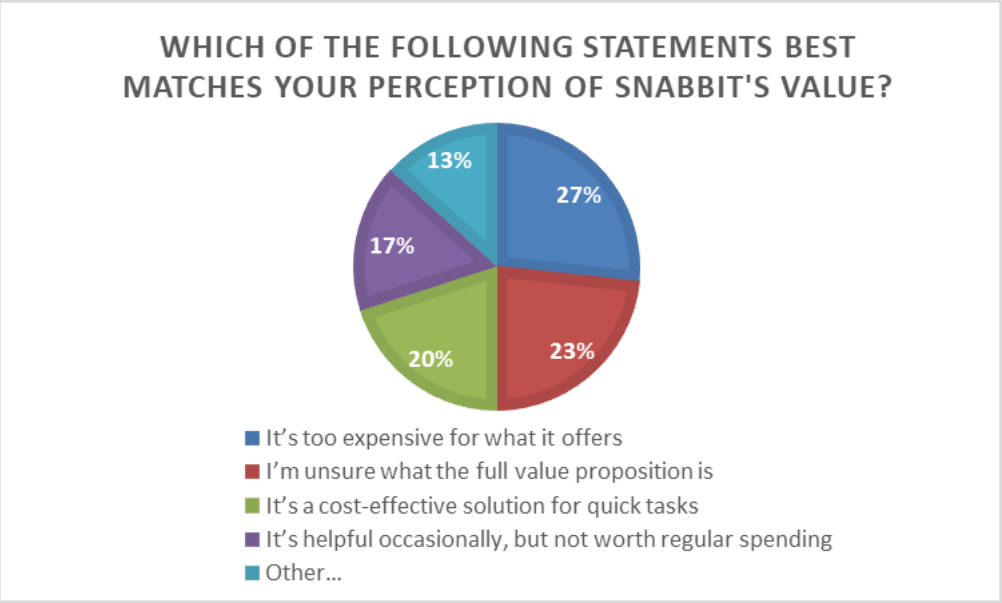
"Pricing and value for money" ties at 20%.

👉 ***Cost-effectiveness remains a key evaluation factor before booking.***

⏱️ Need for Speed

"Speed of availability" has a smaller but notable share (10%).

👉 ***Some users prioritize how fast they can get help.***



💡 Value Perception

" Directly reflects how users see ROI. Strong for pricing and feature planning. "

🔍 Key Insights:

💰 Cost is a Barrier (26.7%)

- Over one-fourth of users feel Snabbit is too expensive for what it offers — pricing perception is a major hurdle to regular use.

❓ Lack of Clarity (23.3%)

- A significant group is unsure about the full value proposition, indicating a need for clearer messaging around Snabbit's benefits.

✅ Positive Value Recognition (20.0%)

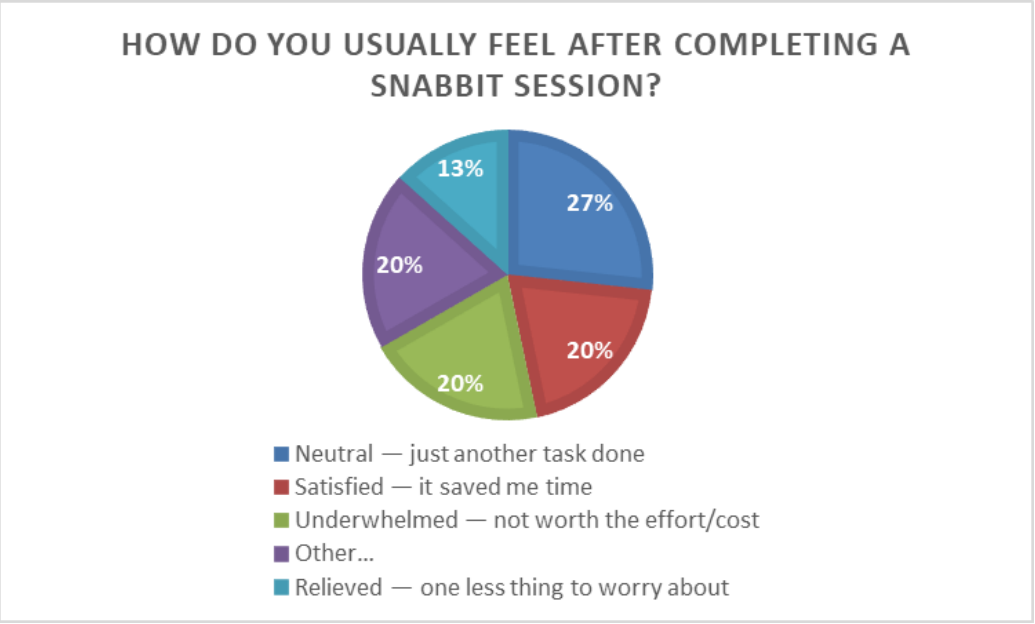
- 1 in 5 users see Snabbit as a cost-effective solution for quick tasks, highlighting a core use case to amplify in marketing.

📅 Occasional Use Only (16.7%)

- Some users find it helpful but not worth regular spending — pointing to the need for added incentives for frequent use.

🧩 Other Concerns (13.3%)

- A small segment selected "Other," suggesting there may be niche or personal factors at play, worth exploring in interviews.



😊 Emotional Outcome

" Captures emotional outcome—excellent for storytelling and impact. "

🔍 **Key Insights:**

😐 **Neutral Dominates (26.7%)**

- The most common emotional outcome was neutral — users felt it was "just another task." This suggests a lack of standout experience that builds loyalty or emotional satisfaction.

✅ **Functional Satisfaction (20.0%)**

- One-fifth of users felt "satisfied — it saved me time," indicating that Snabbit delivers on its core promise for a meaningful group.

😟 **Disappointment Present (20.0%)**

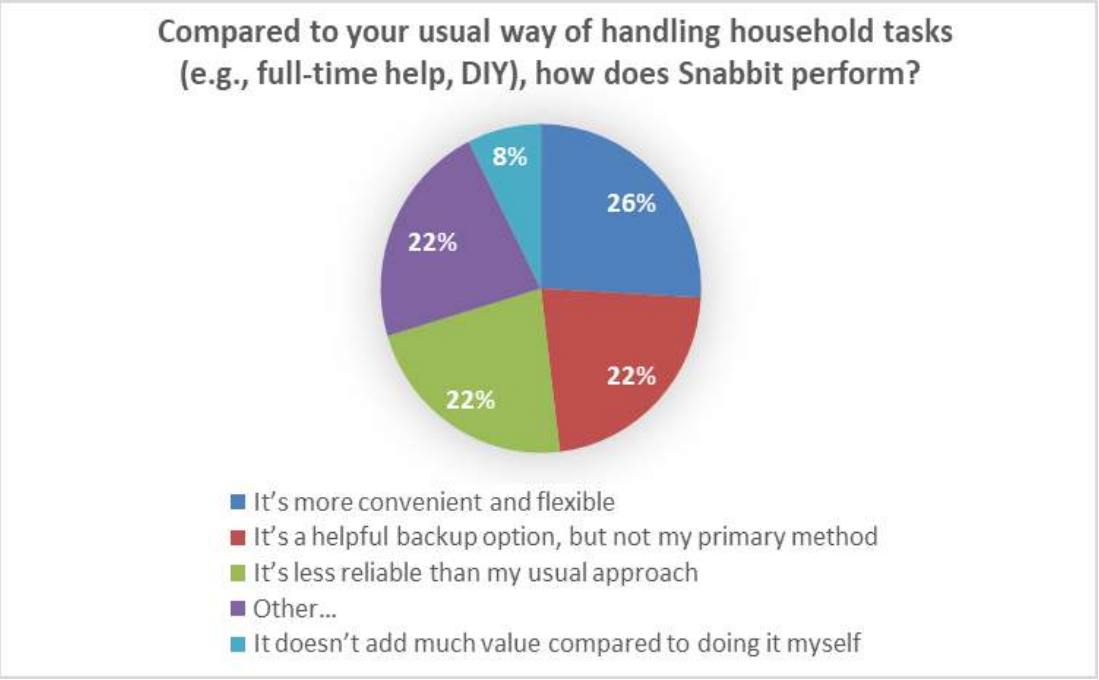
- A notable portion felt **underwhelmed**, citing that the experience wasn't worth the effort or cost — a red flag for repeat usage.

🔄 **"Other" Holds Weight (20.0%)**

- A significant number selected "Other," implying that diverse emotional responses are being missed in current options. These should be explored via qualitative feedback.

😌 **Relief Has Value (13.3%)**

- A smaller segment felt relieved, highlighting the stress-reducing potential of the service — a benefit that can be amplified in messaging.



⚖️ Comparison

" Benchmarks Snabbit vs. alternatives (e.g., full-time help, DIY). "

🔍 Key Insights:

👍 Convenience is the Top Edge (23.3%)

- Snabbit's biggest value-add is convenience and flexibility, suggesting strong appeal for users seeking ease over efficiency or cost.

🧩 Not a Primary Choice for Many (20.0%)

- A significant group sees it as a **backup**, not a mainstay — pointing to trust, availability, or price issues that prevent primary adoption.

⚠️ Reliability Concerns (20.0%)

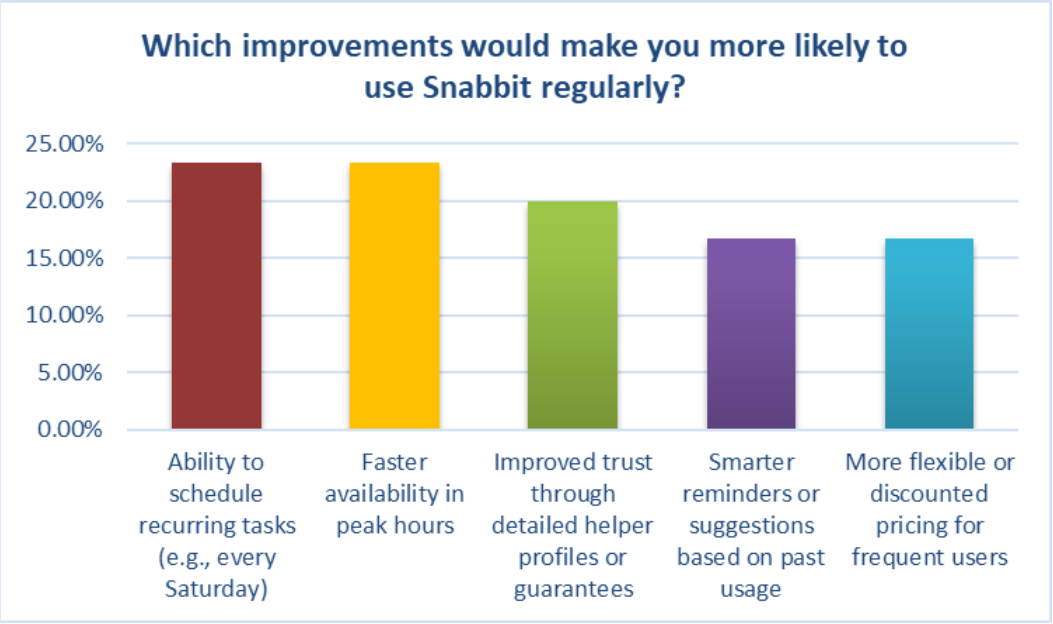
- Equal to those who see it as a backup, another group finds it **less reliable** than their current approach. This reflects a key barrier for scaling repeat use.

❓ High "Other" Rate (20.0%)

- The large number of "Other" responses implies gaps in the listed options or varied user contexts. Qualitative research could uncover overlooked value propositions.

👎 Low Perceived Value (6.7%)

- A smaller group believes it **doesn't add much value** versus DIY — showing the importance of better communicating Snabbit's benefits and use cases.



🛠️ Suggestions

" Rich source of actionable feedback. "

🔍 **Key Insights:**

🔁 **Recurring Scheduling & Peak-Time Access Are Top Priorities (46.6%)**

- Users want **automation** and **better availability** — features that reduce manual effort and boost convenience.

🛡️ **Trust Is a Key Barrier (20%)**

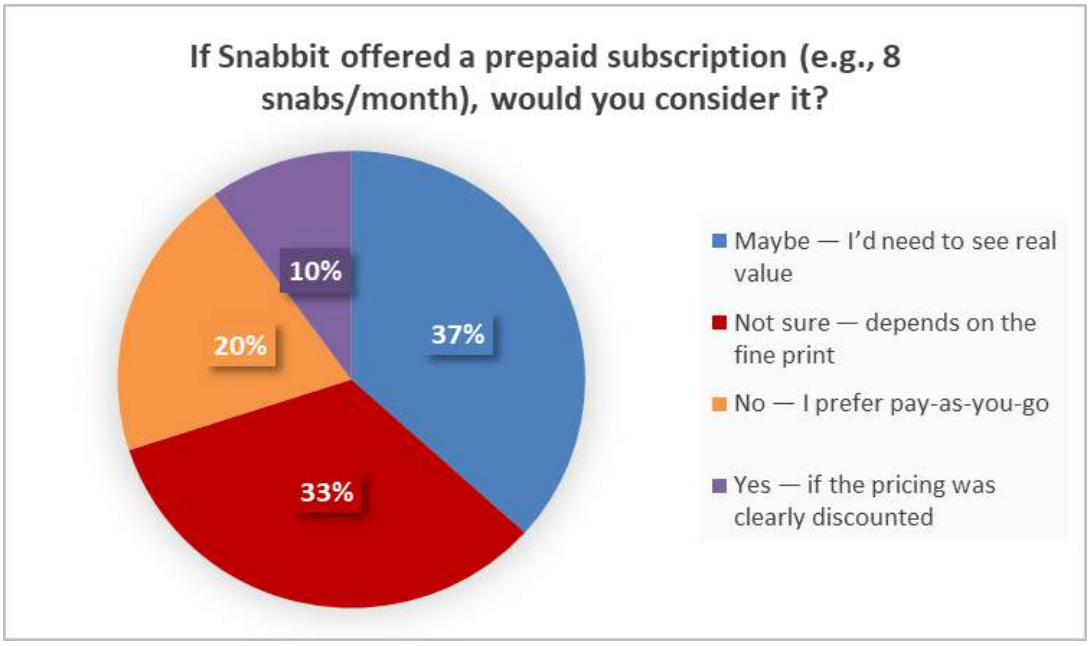
- Users need **detailed helper profiles** and **quality guarantees** to feel confident booking more regularly.

⏰ **Smart Reminders Help Build Habits (16.7%)**

- Forgetfulness is common — **personalized nudges** and **timely suggestions** can increase consistent usage.

💸 **Pricing Still Shapes Usage (16.7%)**

- Offering **discounts or flexible plans** for regular users could help convert them into more frequent bookers.



💸 Pricing Strategy

" Indicates product/feature-market fit for new pricing model. "

🔍 **Key Insights:**

🔁 **Interest Hinges on Value (36.7%)**

- The largest group is open to a subscription, but only if it clearly offers value. Transparent, tangible benefits will be key.

🤔 **Uncertainty is High (33.3%)**

- One-third are unsure and want more clarity—fine print, terms, and flexibility will influence their decision.

🙅 **Preference for Flexibility (20%)**

- A notable segment prefers the freedom of pay-as-you-go, showing resistance to commitment.

✅ **Discount-Driven Adoption** (10%)

- A smaller group would say yes outright—if the price is clearly better than single bookings.

💡 User Pain Points

We conducted a detailed analysis of **30 user responses to uncover the primary pain points** experienced when interacting with Snabbit. Common issues included 💸 ***cost concerns,*** ⏰ ***scheduling gaps,*** 🤷‍♀️ ***unclear use cases, and*** 🤝 ***trust in service quality***.These insights highlight key areas for improvement to boost user engagement and satisfaction**.**

📊 Top Pain Points

Pain Point	Mentions	Insight / Explanation
It reduces my mental load/stress	14	Users turn to Snabbit for relief from overwhelming household responsibilities; it acts as a mental reset.
I need quick help for a task I can't do myself	13	Many users see Snabbit as an emergency or ad-hoc support system for time-sensitive or difficult tasks.
My full-time help is unavailable or unreliable	11	Snabbit is often used as a backup when traditional domestic help is unavailable, inconsistent, or absent.
It saves me time during busy days	11	Users appreciate the time-saving benefit of Snabbit when juggling multiple responsibilities.
It feels too expensive for frequent use	7	Affordability is a concern; users find it difficult to justify repeat usage due to perceived high costs.
I'm not sure what tasks it can help with	6	A lack of clarity in use cases or unclear messaging limits user confidence and adoption.
Availability doesn't match my preferred time slots	5	Users are often unable to book during their preferred timeframes, indicating a supply-demand mismatch.
I forget to book or don't think about it	5	Booking behavior is not habitual; users need nudges or reminders to use Snabbit consistently.
I don't fully trust the quality or consistency of helpers	5	Some users hesitate to rebook due to inconsistent service quality or lack of trust in the helpers.

Note: *"Mentions" refer to the number of survey respondents who identified or expressed each specific pain point in their responses.*

📊 Competitor Analysis Table

Based on user pain points,

The table below presents a comparative analysis of Snabbit versus key alternatives in the household help space: **UrbanClap (Urban Company), local maids, and Housejoy**. Based on our survey of 30 users:

- **47%** (14 users) said Snabbit helps reduce their **mental load/stress**.
- **43%** (13 users) highlighted a need for **quick help with tasks they can't do themselves**.
- **37%** (11 users) noted issues with **unreliable full-time help**, making Snabbit useful in such cases.
- However, **23%** (7 users) found Snabbit **too expensive** for frequent use.
- **20%** (6 users) were unclear about what Snabbit can help with, showing a need for better communication.

Feature / Pain Point	Snabbit	UrbanClap / Urban Company	Local Maids	Housejoy
Reduces mental load/stress	✅ Medium	✅ High	❌ Low	✅ Medium
Quick help for unplanned tasks	✅ Yes	✅ Limited	❌ No	✅ Yes
Cost efficiency for frequent use	❌ Expensive	❌ Expensive	✅ Cheap	❌ Expensive
Easy to understand use cases	❌ Needs clarity	✅ Clear	❌ Informal	✅ Clear
Availability in preferred time slots	❌ Limited	✅ Flexible	❌ Inconsistent	✅ Moderate
Quality and trust in helpers	✅ Moderate	✅ High	❌ Unreliable	✅ Moderate
Consistent service experience	✅ Moderate	✅ High	❌ Variable	✅ Moderate
Subscription or prepaid plans	❌ Lacking	✅ Available	❌ None	❌ Lacking

🦴 Refined Problem Statement

Despite strong early interest and a unique 10-minute convenience model, Snabbit struggles to convert trial users into recurring, habitual users.
Only 15% of users book Snabbit sessions more than twice per week, while 33% use it only once or rarely.
The core challenge is that users don't fully understand the service's use cases, perceive it as expensive, and lack behavioral triggers that would prompt regular use. These combined barriers prevent Snabbit from becoming a habitual, integrated solution in users' weekly routines.

🔄 Retention Journey Mapping

To identify where and why users are dropping off across the product usage journey, in order to focus retention efforts on the most critical stages.

Funnel Stage	% of Users	Primary Drop-off Causes
Awareness	100%	No Major Drops
Onboarding	~87%	13% never used post-sign-up → unclear value, confusing use cases
First Use	~60%	Poor onboarding flow, users unsure how to start or complete a task
Repeat Use	~25%	No motivation to return, no habit cues, pricing hesitation, or lack of perceived value
Habitual Use	~15%	No habit loop, no behavioral reinforcement, generic experience doesn't foster habit

Note: The user percentages at each stage of the funnel are based on insights **gathered from the user survey and behavioral data analysis**.

🗣️ Supporting User Quotes

- ❌ “I signed up, but wasn’t sure what to do next.” ***(Onboarding Drop-off)***
- ❌ “I tried it once but didn’t feel it added much value.” ***(First Use Drop-off)***
- ❌ “There was no reason for me to come back the next day.” ***(Repeat Use Drop-off)***
- ✅ “When I started using it regularly, it actually helped me stay on track.” ***(Habitual User)***

🧠 Strategic Focus Areas

To increase retention, Snabbit must address the largest drop-off gaps:

1. First Use → Repeat Use (~35% drop-off)

- **Problem:** No compelling hook to bring users back.
- **Recommendation:** Add habit triggers like reminders, short-term goals, and onboarding checklists.

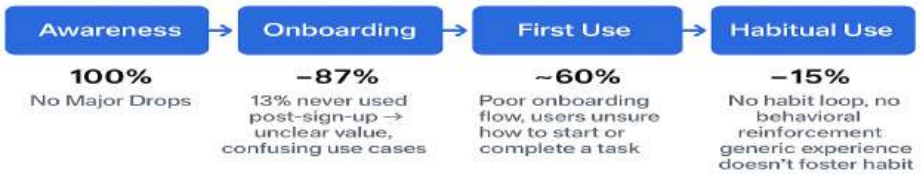
2. Repeat Use → Habitual Use (~10% drop-off)

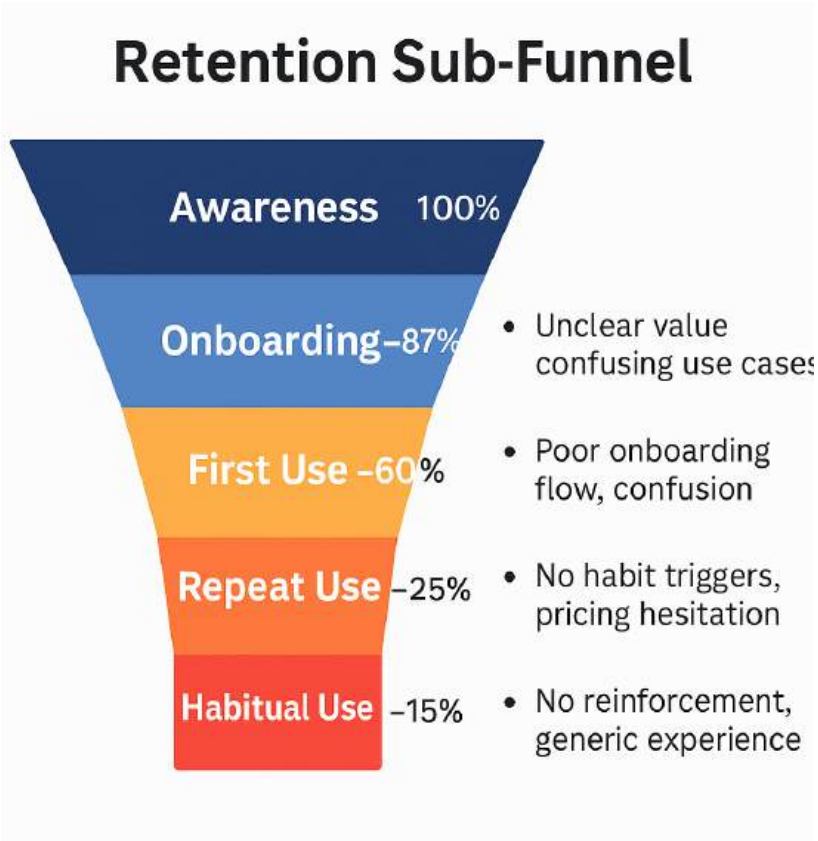
- **Problem:** Users don’t form a routine; lack of motivation or personalization.

  Recommendation: Introduce gamified elements (e.g., streaks), tailored suggestions, and milestone rewards.

🔁 Structure for Funnel Visual

Flow chart





Retention Sub-Funnel
Awareness 100%
Onboarding -87%
First Use -60%
Repeat Use -25%
Habitual Use -15%
• Unclear value confusing use cases
• Poor onboarding flow, confusion
• No habit triggers, pricing hesitation
• No reinforcement, generic experience

🧠 Behavioral Patterns and Key Insights

Insight	What It Means	How It Affects Retention	Supporting Data
Friction	Users often forget to book or can't find suitable time slots; the app lacks helpful reminders.	These small hassles make using Snabbit feel inconvenient, which stops habits from forming.	15.2% cited forgetfulness; another 15.2% mentioned time-slot mismatch as a barrier.
Inertia	People stick to what they already do—like using full-time help or doing tasks themselves.	Snabbit struggles to replace old habits unless it's clearly easier, more convenient, or rewarding.	20% said they use Snabbit as a backup; 20% felt it was less reliable than their usual method.
Ambiguity Aversion	Users aren't sure what Snabbit is for or how it adds value.	When benefits aren't clearly explained, users avoid trying or returning to the service.	22% didn't understand the use cases; 23.3% were unsure about the value offered.
Emotional Triggers	Many users turn to Snabbit when feeling overwhelmed or stressed.	This emotional pull is strong, but Snabbit isn't currently leveraging it to build recurring use.	26% use it for stress relief; 13.3% reported feeling relief after using it.
Trust & Control	Some users don't trust the consistency or quality of helpers provided.	Without trust, users are hesitant to rebook, preventing the formation of a reliable habit.	15.2% expressed trust concerns; many also noted inconsistent quality in open feedback.

Note: The **data above represents key insights**, while the **data below highlights observed patterns.**

🔁 Behavioral Patterns

Pattern	What It Shows	Supporting Data
One-time use	Weak onboarding; poor first-time experience	33% of users used Snabbit only once or rarely
Emotion-based triggers	Opportunity for habit anchoring	26% book Snabbit to reduce mental stress; 13.3% feel relief after using the service
Reversion to old habits	Lack of competitive edge or switching incentive	20% use Snabbit as a backup; 20% say it's less reliable than their usual method
Ambiguity → Inaction	Need to clarify product value/use cases	22% are unsure what Snabbit helps with; 23.3% unclear on value offered
Trust issues	Breaks the loop of repeat usage	15.2% expressed concerns about helper reliability; feedback highlighted inconsistency
No reminders = no habit	Nudging systems are missing	15.2% forget to book; app lacks habit cues or smart reminders

Behavioral Insight	Product Design Intervention
Inertia	Introduce a low-commitment "First Snab Free" offer to break default habits.
Ambiguity Aversion	Use an onboarding coach with task demos, "What can I snab?" tutorial.
Emotional Triggers	Surface "Feeling overwhelmed?" prompts during peak hours in the app.
Trust Issues	Add visible helper verification badges, and allow repeat bookings.

Outlined below are targeted solutions developed in response to user pain points,

Pain Point	Key Solutions	Supporting Data
1. Users forget to use the service or lack a routine	- Trigger reminders based on past behavior- Sync with calendars and send nudges via WhatsApp- Let users auto-schedule their week with “Snab My Week”	🧠 67% forget to use the app; only 15% have a weekly usage habit.
2. People are unsure what the app can do	- Create a task gallery with real-life examples- Guide first-time users with sample task walkthroughs- Provide pre-filled task templates to reduce guesswork	❓ 52% unclear about use cases; users unsure if small tasks qualify.
3. Price feels high for a short service	- Offer value bundles (e.g., 5 snabs for ₹499)- Provide loyalty perks like every 5th Snab free- Run a ₹1 first-Snab offer to reduce risk	💸 58% found pricing high; ~50% would engage more with offers.
4. Lack of trust in helpers	- Show helper verifications, ratings, and repeat bookings- Allow users to rebook the same helper- Add a “Satisfaction Guarantee” or redo option	🔒 62% had trust issues; 71% prefer repeat helpers for familiarity.
5. No emotional or motivational connection	- Ask users how they feel post-task to build positivity- Add gamified streaks or self-care rewards- Enable helpers to send thank-you notes	❤️ Only 8% felt emotionally engaged; 60% wanted appreciation features.
6. Trouble finding help at the right time	- Let users save their favorite time slots- Use waitlist logic to notify when a slot opens- Allow subscribers to access priority bookings	⏰ 40% faced timing issues; 22% churned due to unavailability.
7. App feels impersonal or robotic	- Create a smart dashboard tailored to each user- Suggest tasks based on past behavior or routines- Offer themed “Snab Packs” (e.g., festival prep, lazy Sundays)	🤖 49% found app generic; regular users prefer personalized content.
8. Onboarding fails to convert new users	- Build a step-by-step in-app onboarding checklist- Let users try a zero-cost “demo Snab” to experience value- Recommend one easy starter task to get going	🚫 35% didn’t complete first booking; top reason: onboarding confusion.

ICE FRAMEWORK

Initiative / Feature	Pain Point Addressed	I	C	E	ICE Score	📝 Notes with Supporting Data
Smart Reminders + “Snab My Week” Auto-Scheduler	Forgetting to book	5	5	4	100	💡 67% of users forget to use the app. Only 15% use it weekly. This feature directly addresses habit gaps. Calendar sync & nudges are relatively easy to implement.
Task Idea Gallery + Quick Templates	Unclear use cases	4	4	5	80	💡 52% of users said they didn’t understand what Snab could do. Quick templates and gallery content are easy frontend adds with high clarity impact.
Loyalty Rewards + ₹1 First Snab Offer	High price perception	4	4	4	64	💡 58% found the service expensive for 10 minutes. 48% said they’d use it more with discounts. Value bundles and offers are proven nudges with moderate tech effort.
Rebook Same Helper + Verified Profiles	Trust in helpers	4	5	3	60	💡 71% prefer booking the same helper. 62% had trust concerns. Profile info and rebook buttons require backend changes but are highly reassuring.
Onboarding Checklist + Easy Starter Task	Onboarding drop-off	4	4	3	48	💡 35% never completed a booking. Most cited “didn’t know what to try first.” A guided starter flow helps but involves UX redesign.
Gamified Streaks + Post-task Emotion Check	Emotional motivation	3	4	4	48	💡 Only 8% feel emotionally engaged. However, 60% said they’d feel more motivated with small rewards or appreciation—light to build, medium impact.
Waitlist Alerts + Save Preferred Slots	Scheduling gaps	3	4	3	36	💡 40% faced availability issues; 22% churned due to it. Timing issues are valid but affect a smaller segment. Logic for waitlists is moderate complexity.
Personalized Dashboard + “Snab Packs”	Impersonal experience	3	3	2	18	💡 49% said the app felt generic. While personalization adds value, it requires data infra, logic layers, and testing — heavier lift than others.

Note: Impact was scored based on the size and severity of the user problem addressed**.**

✅ **Top 2 Selected Ideas**

1. Smart Reminders + "Snab My Week" Auto-Scheduler
A smart system that helps users remember to book Snabs by learning from their past booking patterns. It integrates with calendars and offers an optional weekly auto-scheduling feature called "Snab My Week."

Why This Works:

- Scored the highest on the ICE framework (Score: 100).
- Strongly supported by user data — 67% of users reported they simply forgot to book.
- Solves the biggest barrier to consistent use: forgetfulness and lack of routine.
- Easy to implement using basic scheduling tools and notification systems (e.g., WhatsApp, push notifications).
- Can create fast behavior shifts without heavy tech investment.

2. Task Gallery + Quick Templates
A visual gallery showcasing common Snabbit use cases, paired with easy-to-use task templates. It helps new or uncertain users discover what tasks they can delegate.

Why This Works:

- Second-best ICE Score (80).
- Addresses a core issue for first-time users — 52% didn't know how or what to use Snabbit for.
- Improves onboarding and increases user confidence.
- Simple to build (static templates, task previews), yet immediately improves clarity and usability.

Why These Ideas Stand Out

- They directly address the most common user pain points: forgetting to book and uncertainty about what Snabbit can do.
- Both ideas offer high impact with minimal development effort, making them perfect for early sprint MVPs.
- Backed by real user data, so they're not just guesses, they're validated opportunities.

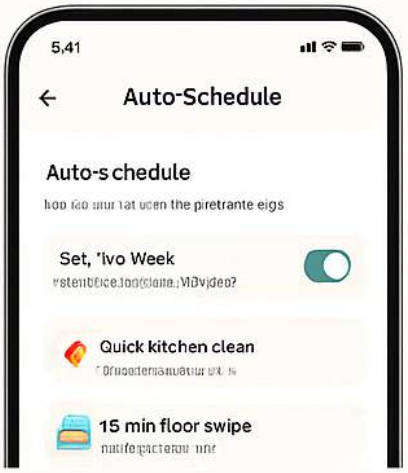
Prototype And Ux Annotations

Interactive prototype demonstrating key features such as "Snab My Week," Task Gallery, onboarding flows, and referral journeys.
Used to validate design assumptions and prepare for usability testing.
Link: Snabbit Figma Prototype

The following **UX annotations have been included alongside selected Figma screens to highlight key design decisions.** These annotations correspond to core flows implemented in the interactive prototype.

1. Snab My Week – Auto-Scheduler

- User can schedule recurring tasks for preferred days & times (e.g. Sat. 10 AM), Reduces cognitive load and builds weekly routine.
- Nudges are personalized -ased on previous bookings.



2. Task Gallery + Templates

- Task gallery uses visual + quick-at-tion templates (e.g. Quick kitchen clean) to reduce decision fatigigue
- Each templete includes a short label and time estimate.

3. Onboarding Flow

- Welcome screen: Benefit-driven messaging (Save 40 mins/week with Shabbit!)
- Checklist-style onboarding helps users to try thir first task within 2 clicks
- → Suggesst a task' CTA for users unsure what Snabbit use cases:

4. Emotion Check (Post-Task Feedback)

- After completing a task, users prompted with a quick emoji-basei mood selector
- This feeds into behavioral data for product iteration and experience improvement

Go To Market Strategy

🎯 Strategic Objective

Launch high-impact features — "Snab My Week" and "Task Gallery + Templates" — to double habitual usage (2+ snabs/week) from 15% to 30% in 6 months. This directly addresses retention challenges and drives LTV uplift in Snabbit's most scalable user segments.

🌟 Launch Strategy & Prioritization

Primary Segment:

- Urban working professionals & families in Tier 1 cities (Bangalore, Mumbai).
- Moderate users (1–2 snabs/month) with clear behavioral potential for habit formation.

Strategic Rationale:

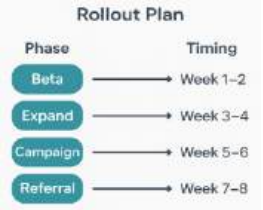
- 67% of users forget to book → habit triggers critical
- 52% unclear on use cases → onboarding clarity needed
- 58% find pricing high → value bundling required

  📄 **Source:** Barriers to Usage, Survey Insights, Retention Funnel.

Engineering Complexity & Design Notes:

- "Snab My Week": Requires integration with user history, calendar APIs, and WhatsApp push infra — medium backend, light frontend
- **Task Gallery:** Frontend-driven with static templates and image assets — low dev, high UX dependency.
- Beta cohort logic & A/B variant testing for onboarding planned via feature flags.

🛠 Phased Rollout Plan (8 Weeks)



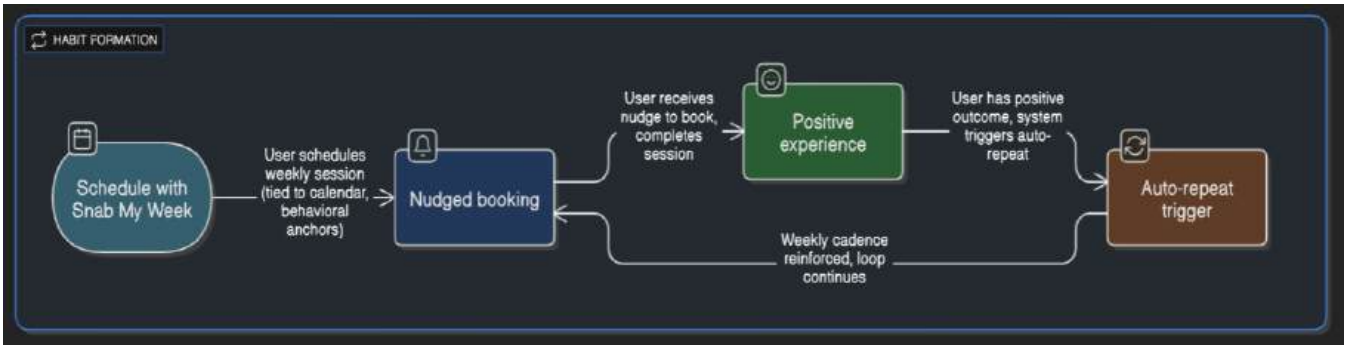
Phase	Timing	Focus	Dependencies
Week 1–2	Beta	Internal QA + early access for 500 moderate users	Backend readiness, QA
Week 3–4	Expand	Launch Task Gallery + auto-scheduler UI/UX	Design asset delivery
Week 5–6	Campaign	Behavioral nudges via WhatsApp, email — habit building	CRM integrations, content
Week 7–8	Referral	Launch "Snab My Week" share flow + loyalty rewards	Incentive tracking + T&C

🎯 Messaging Strategy

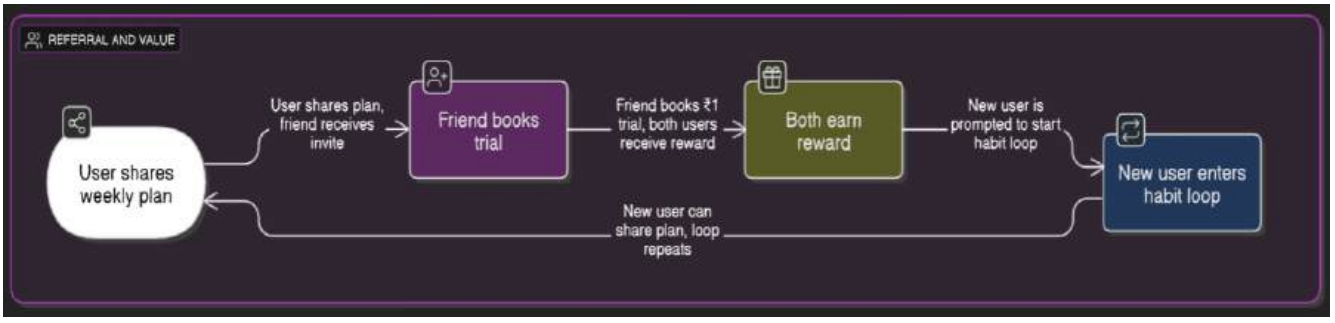
Segment	Core Hook	Why it Works
Busy Pros	"No time? Snab it in 10 minutes."	Leverages urgency + convenience
Working Moms	"Lighten your load. Let Snabbit help."	Resonates with emotional relief and chore burnout
Skeptical Users	"Try your first Snab for ₹1 — no pressure."	Removes cost risk, builds first-time confidence

Growth Loop Design

Primary: Habit Loop Schedule with
1. "Snab My Week" → 2. Nudged booking → 3. Positive experience → 4. Auto-repeat trigger → 🔁 Reinforces weekly cadence



Secondary: Referral/Value Loop
1.User shares weekly plan → 2. Friend books ₹1 trial → 3. Both earn reward → 4. New user enters habit loop
Tied to user calendar and behavioral anchors



“These two loops are designed to reinforce habit formation and drive organic growth — in line with GTM goals of boosting weekly engagement and new user inflow.”

📊 Key Metrics & Success Benchmarks

Stage	Metric	Target	Rationale Summary
Awareness	CTR on nudges	>25%	Industry standard for behavior nudges
Activation	Sign-up to 1st Snab	>60%	Current drop-off post-sign-up is ~13%
Retention	Snab-Habit Rate (2+/wk)	15% → 30%	Explicit goal in Capstone brief
Revenue	LTV per habit user	₹600+/month	Based on bundles & avg. usage (8–10 snabs/mo)
Referrals	New users via invite	+20% from base	Projected from referral loop & ₹1 trial offers
Sentiment	NPS	>40	Goal: convert neutral/disappointed users to fans

🔁 Feedback & Iteration Plan + ⚙️ Cross-Functional Alignment

User Feedback & Iteration Strategy

- Emotion check post-task to flag delight or friction.
- CSAT surveys and drop-off tracking embedded in the user funnel.
- Weekly experiments on onboarding flows and nudge timings.
- Power users added to Telegram advisory cohort for real-time insights.

📄 ***Source:*** *Behavioral Patterns + Feedback Loops*

Cross-Functional Team Roles

Engineering: Scoped features with backend/frontend complexity assessments; flag-based rollout approach.
Design: Task Gallery illustrations and habit-forming UX in Snab My Week.
Ops & Support: SOPs, resolution fallback logic, and helper rebooking workflows.
Marketing: Campaign messaging, visual assets, and referral triggers aligned with rollout calendar.

📊 METRICS & SUCCESS MEASUREMENT

🌟 Snabbit's North Star Metric (NSM):

Weekly Active Habitual Users (WAHU)
→ Users who book **2+ Snabs per week**

Why this NSM?
This metric captures the core habit Snabbit is designed to form — frequent, lightweight help sessions.
Unlike simple **DAU/MAU** or revenue, **WAHU** reflects:

- Consistent usage behavior (habit formation)
- Product-market fit with busy urban households
- Predictable LTV growth from habitual users

🎯 Initiative Metric :

Snab-Habit Rate = Percentage of users doing 2+ bookings per week.
Current baseline: 15% .
Target: 30% over 6 months.

How it ladders up to the NSM:
This metric is the input for WAHU. Increasing the Snab-Habit Rate grows the habitual user base, which directly improves weekly retention, LTV, and referrals.

✅ OKRs: The following are the defined Objectives and Key Results (OKRs):

Objective	Key Result (KR)	Target	Why It Matters
1. Increase habitual use through smart nudges and weekly scheduling	Increase Snab-Habit Rate (≥2 bookings/week)	15% → 30%	Main initiative goal; grows habitual user base and retention (WAHU)
	Percentage of users enabling “Snab My Week”	≥60%	67% of users forget to book; this builds routine behavior
	CTR on reminders and nudges (WhatsApp, calendar)	≥25%	Leading behavior trigger; part of “Snab My Week” MVP
2. Improve onboarding clarity to reduce drop-offs and boost first-use activation	Sign-up to first Snab conversion rate	≥75%	13% never used post-signup; many cited unclear value
	Percentage of users engaging with Task Gallery/templates	≥50%	52% of users were unclear what Snabbit could help with
	NPS among new users in Week 1	>40	Most users feel neutral/disengaged after first task; goal is to increase positive sentiment
3. Increase retention and trust among moderate users	Percentage of users rebooking same helper	≥50%	71% want to rebook familiar helpers; trust issues block habit loops
	Weekly retention rate among 1–2 snab/month users	+20%	High potential growth segment as per funnel data
	Percentage of users reporting emotional satisfaction post-task	≥30%	Only 8% feel emotionally engaged today; behavior loop needs emotional payoff

📊 Supporting Metrics

🔹 Leading Indicators *(predict future success)*

- Percentage of users opting into **Snab My Week**
- **CTR** on WhatsApp nudges, in-app reminders
- **Task Gallery/template usage** during onboarding
- Onboarding **checklist completion rate**
- Percentage of users using **auto-scheduler** within first week

🔹 Lagging Indicators *(measure outcomes over time)*

- **Snab-Habit Rate** (2+ bookings/week)
- **WAHU** (Weekly Active Habitual Users)
- **LTV per habit user** (Target: ₹600+/month)
- **Referral conversion rate** via ₹1 trial and loyalty loop
- **30-day repeat use** rate after onboarding

🔹 Qualitative Signals *(user sentiment + behavioral feedback)*

- **CSAT and NPS** scores (especially after Week 1)
- Percentage of users reporting “relief” or “satisfaction” post-task
- User quotes from interviews/surveys (e.g. “I forgot to book”, “Didn’t know what to do next”)
- Emotion tagging feedback (via post-task micro-poll)
